**NEW QUESTION: 1**

- A. Option D
- B. Option C
- C. Option B
- D. Option A

**Answer: B**

Explanation:

- Scenario: A group of junior database administrators must be able to view the server state of the SQL Server instance that hosts the Sales database. The junior database administrators will not have any other administrative rights.
- Credentials provide a way to allow SQL Server Authentication users to have an identity outside of SQL Server. Credentials can also be used when a SQL Server Authentication user needs access to a domain resource, such as a file location to store a backup.

### **NEW QUESTION: 2**

You have an Azure subscription that contains 100 virtual machines.

You regularly create and delete virtual machines.

You need to identify unused disks that can be deleted.

What should you do?

- A. From the Azure portal, configure the Advisor recommendations.
- B. From Cloudyn, create a Cost Management report.
- C. From Microsoft Azure Storage Explorer, view the Account Management properties.
- D. From Cloudyn, open the Optimizer tab and create a report.

**Answer: C**

### **NEW QUESTION: 3**

**Answer:**

Explanation:

Explanation

Box 1: Create the fact table.

Box 2: Load the data.

Box 3: Create the columnstore index with the MAXDOP keyword.

Only nonclustered columnstore indexes are available in SQL Server 2012 so when the index is created, you cannot update the table (without using partition switching). Therefore you have to load the data BEFORE creating the index.

In SQL Server 2014, you could create a clustered columnstore index which would allow updates to the table after the index is created.
