Your company has a main office and a branch office. The main office is located in Seattle. The branch office is located in Montreal.

Each office is configured as an Active Directory site. The network contains an Active Directory domain named adatum.com.

The Seattle office contains a file server named Server1. The Montreal office contains a file server named Server2.

The servers run Windows Server 2012 and have the File and Storage Services server role, the DFS Namespaces role service, and the DFS Replication role service installed.

Server1 and Server2 each have a share named Share1 that is replicated by using DFS Replication.

You need to ensure that users connect to the replicated folder in their respective office when they connect to \\contoso.com\Share1.

Which three actions should you perform? (Each correct answer presents part of the solution. Choose three.)

- A. Create a new topology.
- B. Share and publish the replicated folder.
- C. Create a namespace.
- D. Create a replication connection.
