NEW QUESTION: 4

Testlet: Humongous Insurance You need to recommend a BitLocker recovery method that meets the company's technical requirements.

Which recovery method should you recommend? Humon1 (exhibit):

Humon2 (exhibit):

- A. a recovery password printed and stored in a secure location
- B. a data recovery agent
- C. a recovery key
- D. arecoverypasswordstoredinActiveDirectory

Answer: B

Explanation:

<http://technet.microsoft.com/en-us/library/dd875560%28WS.10%29.aspx>

Data recovery agents are accounts that are able to decrypt BitLocker-protected drives by using their smart card certificates and public keys. Recovery of a BitLocker-protected drive can be accomplished by a data recovery agent that has been configured with the proper certificate. Before a data recovery agent can be configured for a drive, you must add the data recovery agent to Public Key Policies\BitLocker Drive Encryption in either the Group Policy Management Console (GPMC) or the Local Group Policy Editor. You must also enable and configure the Provide the unique identifiers for your organization policy setting to associate a unique identifier to a new drive that is enabled with BitLocker. An identification field is a string that is used to uniquely identify a business unit or organization. Identification fields are required for management of data recovery agents on BitLocker-protected drives. BitLocker will only manage and update data recovery agents when an identification field is present on a drive and is identical to the value configured on the computer.
