NEW QUESTION: 2
Which Call Admission Control mechanism is supported for the Cisco Extension Mobility Cross Cluster solution?
A. RSVP CAC
B. H.323 gatekeeper
C. visiting cluster's LBM hub
D. intercluster Enhanced Location CAC
E. Location CAC
Answer: A

Explanation:
Configuring extension mobility cross cluster (EMCC) is nothing
you should take lightly. EMCC requires a lot of configuration
parameters including the exporting and importing of each
neighbor cluster's X.509v3 digital certificates. EMCC is
supported over SIP trunks only. Presence is another feature
that's only supported over SIP trunks. If you want to be able
to perform scalable Call Admission Control (CAC) in a
distributed multi-cluster call processing model, you will need
to point an H.225 or Gatekeeper controlled trunk to an
H.323 Gatekeeper for CAC... but if you want to support presence
and EMCC between clusters and maintain CAC.

NEW QUESTION: 3
You are developing a Windows Communication Foundation (WCF)
service.
