**NEW QUESTION: 2**

Which of the following is a drawback of Network-based IDSs?

- A. It cannot analyze encrypted information.
- B. It is very costly to manage.
- C. It is very costly to setup.
- D. It is not effective.

**Answer: A**

Explanation:

Network-based IDSs cannot analyze encrypted information. This problem is increasing as more organizations (and attackers) use virtual private networks. Most network-based IDSs cannot tell whether or not an attack was successful; they can only discern that an attack was initiated. This means that after a network-based IDS detects an attack, administrators must manually investigate each attacked host to determine whether it was indeed penetrated.
