**NEW QUESTION: 3**

Which of the following payout options would provide an annuity owner with the biggest monthly check?

- A. unit refund life
- B. joint and last survivor
- C. straight life
- D. life with period certain

**Answer: C**

Explanation:

Explanation/Reference:

Explanation: The straight life payout option would provide an annuity owner with the biggest monthly check. Under this option, the annuity payments stop upon the death of the owner. All of the other options would require that the insurance company stand ready to continue payments beyond the owner's death.

This means more risk to the insurance company and, ergo, lower payments to the owner.

**NEW QUESTION: 4**

CORRECT TEXT

Scenario

Following the merger of two financial companies, management is considering combining the two distinct customer call centers into a single physical location. In addition to the overall call center headcount increasing by 30%, the support for two distinct customer bases presents the potential of having two different desktop PCs on the desk of each call center employee. Instead of correspondingly increasing IT support headcount to manage the single, larger call center and call center infrastructure, management believes they can reduce the required time to support call center operations by 40% if they employ virtual desktop technology.

An initial assessment has identified the need for a centralized storage solution that could support 500 virtual desktops running a variety of applications that can scale quickly to accommodate an expected increase in call center staff. The customer is already an HP Blade System customer using HP Virtual Connect Flex-10.

Some of the additional business criteria identified in customer planning interviews includes:

Use client virtualization for the desktops.

Achieve the highest possible density and performance for the virtual desktops, but keep the virtual desktop storage traffic off the network due to a current, existing limitation of only 1GbE.

Do not use standalone, network-attached storage.

Limit the impact of additional rack space.

Minimize the risk of additional help-desk tickets.

Present multiple solutions, prioritized with a recommendation.

Refer to the scenario.

The customer realized that they did not include any requirements for high availability. They need to ensure that at least 75% of the users can be supported from any location in the event of a disaster while keeping implementation costs as low as possible. They tell you that all users are non-persistent, use the same desktop image, and that the network can be upgraded to 10Gb.

Which diagram demonstrates how the solution should be modified to meet the new requirements?

**Answer:**

Explanation:

User A in DataCenter A (375 VmWare) transfer to DataCenter B

User B in DataCenter B (375 VmWare) transfer to DataCenter A
