In larger deployments, it is sometimes necessary to add additional SharePoint servers [Reliable C S4CSV 2105 Exam Simulator](#) as a way of increasing a farm's capacity, You will enjoy the most considerate service and experience during choosing our IBM Robotic Process Automation v20.12.x Developer valid study questions.

To satisfy your habit of learning by papers, the C1000-123 pass-sure braindumps: IBM Robotic Process Automation v20.12.x Developer offers you the PDF version for you which are able to be printed out.

A preview of actual IBM C1000-123 test questions 3, Something still benefit you more, your study will be very convenient with C1000-123 actual test questions, PDF version.

With our C1000-123 study questions for 20 to 30 hours, we can

Answer: B

NEW QUESTION: 2

Which two locations can be configured as a source for the IOS image in the boot system command? (Choose two.)

- A. HTTP server
- B. Telnet server
- C. NVRAM
- D. TFTP server
- E. flash memory
- F. RAM

Answer: D,E

Explanation:

The following locations can be configured as a source for the IOS image:

- 1.+ Flash (the default location)
- 2.+ TFTP server
- 3.+ ROM (used if no other source is found)

NEW QUESTION: 3

What is the result of a "Consolidate" action on a virtual machine?

- A. A new snapshot with memory state will be created.
- B. Redundant delta disks will be combined and deleted.
- C. All snapshots on the virtual machines will be deleted.
- D. The virtual machine will be reverted to its last snapshot.

Answer: B

Explanation:

Explanation/Reference:

Explanation:

When initiating a snapshot delete action, the delta disk changes are then written to the base or parent VMDK file and the snapshot is deleted. With vSphere 5, a new option called consolidate was introduced.

The purpose of consolidate is if the snapshot deletion process was not successful. In the past there were incidents where a user would initiate a snapshot deletion thinking the snapshot got deleted, yet to find out later that that's not the case. With the consolidation option, when you initiate a snapshot deletion, if the snapshot fails to delete, the VM will then generate a warning letting you know that a consolidation is required. You would then run the snapshot consolidation option and the snapshot would get committed.
