NEW QUESTION: 1

Which is a service request?

- A. Requesting investigation of a degraded service
- B. Requesting an enhancement to an application
- C. Requesting a workaround for an issue
- D. Requesting information about how to create a document

Answer: D

NEW QUESTION: 2

You have created a Voice Form and attempted unsuccessfully to enable it. What can prevent you from enabling the Voice Form?

- A. You deselected the Transfer to Attendant Allowed field.
- B. The transcriber field separator is not selected as Field Name.
- C. You must try again later, because voice forms maintenance is in progress.
- D. The Voice Answer fields are not recorded.

Answer: D

NEW QUESTION: 3

DRAG DROP - (Topic 7)

Answer:

Explanation:

Explanation:

The question asks us to "begin with the lowest layer" so we have to begin with Layer 1:

verify physical connection; in this case an Ethernet cable connection. For your information,

"verify Ethernet cable connection" means that we check if the type of connection

(crossover, straight-through, rollover...) is correct, the RJ45 headers are plugged in, the signal on the cable is

acceptable...

Next we "verify NIC operation". We do this by simply making a ping to the loopback interface 127.0.0.1. If it works then the NIC card (layer 1, 2) and TCP/IP stack (layer 3) are working properly.

Verify IP configuration belongs to layer 3. For example, checking if the IP can be assignable for host, the PC's IP is in the same network with the gateway...

Verifying the URL by typing in your browser some popular websites like google.com, microsoft.com to assure that the far end server is not down (it sometimes make we think we can't access to the Internet). We are using a URL so this step belongs to layer 7 of the OSI model.

NEW QUESTION: 4

After reviewing UDLD status on switch ports, an engineer notices that the." Which statement describes what this indicates about the status of the port?

A. The UDLD port is placed in the "unknown" state for 5 seconds until the next UDLD packet is received on the interface.

B. UDLD moved into aggressive mode after inconsistent acknowledgements were detected.

C. The bidirectional status of "unknown" indicates that the port will go into the disabled state because it stopped receiving UDLD packets from its neighbor.

D. The port is fully operational and no known issues are detected.

Answer: D
