You are configuring log shipping for a Microsoft SQL Server database named salesOrders.
You run the following Transact-SQL script:

You need to determine the changes that the script has on the environment.
How does the script affect the environment? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:
Explanation:

Explanation:
Box 1: is
Note: sp_change_log_shipping_primary_database,
Parameter: [@backup_share =] 'backup_share'
Is the network path to the backup directory on the primary
server. backup_share is nvarchar(500), with no default, and
cannot be NULL.
Box 2: 72 hours
4320 minutes is 72 hours.
Note: sp_change_log_shipping_primary_database,
Backup_retention_period parameter
@backup_retention_period =] 'backup_retention_period'
Is the length of time, in minutes, to retain the log backup
file in the backup directory on the primary server.
backup_retention_period is int, with no default, and cannot be
NULL.
Box 2:
SP_Add_Retcode
Box 3: 24 hours
sp_add_schedule
@freq_type (here 4, which is daily)
A value indicating when a job is to be executed. freq_typeis
int, with a default of 0, and can be one of these values.
ValueDescription
1Once
4Daily

32Monthly, relative to freq_interval
64Run when SQLServerAgent service starts
128Run when the computer is idle
@freq_interval =] freq_interval
The days that a job is executed. freq_interval is int, with a
default of 1, and depends on the value of freq_type.
Value of freq_typeEffect on freq_interval
1 (once)freq_interval is unused.

Answer: B
Explanation:
RSTP works by adding an alternative port and a backup port compared to STP.
These ports are allowed to immediately enter the forwarding state rather than passively wait for the network to converge.
RSTP bridge port roles:
Root port A forwarding port that is the closest to the root bridge in terms of path cost Designated port A forwarding port for every LAN segment Alternate port A best alternate path to the root bridge.
This path is different than using the root port.
The alternative port moves to the forwarding state if there is a failure on the designated port for the segment.
Backup port A backup/redundant path to a segment where another bridge port already connects.
The backup port applies only when a single switch has two links to the same segment (collision domain).
To have two links to the same collision domain, the switch must be attached to a hub.
Disabled port Not strictly part of STP, a network administrator can manually disable a port.

NEW QUESTION: 3
HR Professionals must recognize types of unlawful discrimination to be in compliance with US law. One type of discrimination is disparate treatment. Which one of the following is the best definition of disparate treatment?
A. When an employer treats a candidate differently based on the person's race, color, sex, religion, national origin, age, disability, or military or veteran status
B. When an employee treats other employees differently based on their past work efforts.
C. When an employer creates a quid pro quo status based on an employee's rebuttal of unwelcome sexual advances.
D. When an employer treats all applicants the same regardless of their race, color, sex, religion, national origin, age, disability, or military or veteran status.

NEW QUESTION: 4
Which two statements about the function of the stub feature in
EIGRP are true? (Choose two.)
A. It stops the stub router from propagating dynamically
learned EIGRP prefixes to the hub routers.
B. It stops the stub router from sending queries to peers.
C. It stops the hub router from sending queries to the stub
router.
D. It stops the hub router from propagating dynamically learned
EIGRP prefixes to the stub routers.
Answer: A,C
Explanation:
When using the EIGRP Stub Routing feature, you need to
configure the distribution and remote routers to use EIGRP, and
to configure only the remote router as a stub. Only specified
routes are propagated from the remote (stub) router. The router
responds to queries for summaries, connected routes,
redistributed static routes, external routes, and internal
routes with the message "inaccessible." A router that is
configured as a stub will send a special peer information
packet to all neighboring routers to report its status as a
stub router.
Without the stub feature, even after the routes that are sent
from the distribution router to the remote router have been
filtered or summarized, a problem might occur. If a route is
lost somewhere in the corporate network, EIGRP could send a
query to the distribution router, which in turn will send a
query to the remote router even if routes are being summarized.
If there is a problem communicating over the WAN link between
the distribution router and the remote router, an EIGRP stuck
in active (SIA) condition could occur and cause instability
elsewhere in the network. The EIGRP Stub Routing feature allows
a network administrator to prevent queries from being sent to
the remote router.
