### NEW QUESTION: 3

DRAG DROP

An organization deploys Microsoft SQL Server instances at a main office and the organization's remote office. SQL Server is not using Windows failover clustering.

Remote employees report connection issues when they attempt to run queries against a specific database that is hosted at the main office.

You need to ensure that remote employees can retrieve data from a database instance that is hosted in the remote office.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Answer:**

Explanation:

Explanation:

Database mirroring is a solution for increasing the availability of a SQL Server database.

Mirroring is implemented on a per-database basis and works only with databases that use the full recovery model.
