#### **NEW QUESTION: 1**

You are enabling 802.1X authentication on an EX Series device. You are configuring the switch in the conference room where you will have non-employees with devices that do not support 802.1X authentication connecting to your network. You must ensure that these users can connect to your network but are restricted to Internet access only.

What should you do to accomplish this task?

- A.** You should assign a guest VLAN to the interfaces and isolate that VLAN to Internet access only.
- B.** You must add a RADIUS account for each user and assign them to the appropriate VLAN.
- C.** You should configure a server-reject VLAN to the interfaces and isolate that VLAN to Internet access only.
- D.** You should ensure that the server-fail fallback feature is enabled and users are assigned to the appropriate VLAN.

**Answer: A**

#### **NEW QUESTION: 2**
