And at the same time, our website have become a famous brand in the market.

NEW QUESTION: 1

Refer to the exhibit.

Notice that debug ip bgp updates have been enabled. What can you conclude from the debug output?

- A. BGP neighbor 10.1.3.4 performed a graceful restart.
- B. BGP neighbor 10.1.3.4 established a new BGP session.
- C. This is the result of the clear ip bgp 10.1.3.4 in command.
- D. This is the result of the clear ip bgp 10.1.3.4 out command.

Answer: C

Explanation:

If you enter the clear ip bgp out command for a BGP peer, that router resends its BGP prefixes to that peer. This does not cause a change in the best path on the receiving BGP peer. Hence, there is no change in the Table Version on that peer.

When you run the debug ip bgp updates on the receiving router, you see:

```
BGP(0): 10.1.3.4 rcvd UPDATE w/ attr: nexthop 10.1.3.4, origin i, metric 0, merged path 4,
```

```
AS_PATH
```

```
BGP(0): 10.1.3.4 rcvd 10.100.1.1/32...duplicate ignored
```

The received update is recognized as a duplicate, so it is ignored and no best path change occurs.
