## **NEW QUESTION: 2**

You do not want users to execute queries while in the Order\_Items block, so you write the following key-Exeqry trigger for the Order\_Items block:

```
GO_BLOCK('orders');
```

```
EXECUTE_QUERY;
```

This works fine except that in the Order\_Items block, when you click Enter Query first, and then click Execute Query, you get the error message "FRM-41009: Function key not allowed." What can you do correct this?

**A.** Delete the Key-Exqry trigger and define the following Key-Entqry trigger for the Order\_Items block:

```
ENTER_QUERY;
```

```
GO_BLOCK ('orders');
```

**B.** You cannot change this behavior, but you should use the On-Message trigger to display a more meaningful message.

**C.** Change the key-Exqry trigger to:

```
IF : SYSTEM.MODE := 'ENTER-QUERY' THEN
```

```
GO_BLOCK ('orders');
```

```
EXECUTE_QUERY;
```

```
ELSE
```

```
MESSAGE ('you cannot execute a query for the Order_Items block');
```

```
END IF;
```

Define the following Key-Entqry trigger for the Order\_Items block:

```
GO_BLOCK ('orders');
```

```
ENTER_QUERY
```

**D.** Add the following as the first of the key-Exqry trigger to Yes.

```
SYSTEM.mode := 'NORMAL';
```

**E.** Delete the Key-Exqry trigger and define the following Key-Entqry trigger for the Order\_Items block:

```
GO_BLOCK ('orders');
```

```
ENTER_QUERY;
```

**F.** Change the Key-Exeqry trigger to:

```
IF :SYSTEM.MODE != 'ENTER-QUERY' THEN
```

```
GO_BLOCK('orders');
```

```
EXECUTE_QUERY;
```

```
ELSE
```

```
MESSAGE ('You cannot execute a query in this block');
```

```
ENTER_QUERY;
```

```
GO_BLOCK ('orders');
```

**G.** Set the Fire in Enter-Query Mode property of the Key-Exeqry trigger to Yes.

**Answer: E**

Explanation:

Note: You can use system variables and built-ins to obtain information about queries.

Using SYSTEM.mode

Use the SYSTEM.mode system variable to obtain the form mode.

The three values are NORMAL , ENTER\_QUERY , and QUERY.

NORMAL Indicates that the form is currently in normal processing mode. ENTER-QUERY Indicates that the form is currently in Enter Query mode. QUERY Indicates that the form is currently in fetch processing mode, meaning that a query is currently being processed.

Note 1: ENTER\_QUERY procedure

Clears the current block and creates a sample record. Operators can then specify query conditions before executing the query with a menu or button command. If there are changes to commit, the Forms Builder prompts the operator to commit them before continuing ENTER-QUERY processing

Note 2: EXECUTE\_QUERY procedure Clears the current block, opens a query, and fetches a number of selected records. If there are changes to commit, Forms Builder prompts the operator to commit them before continuing EXECUTE-QUERY processing

### **NEW QUESTION: 3**

**A.** Add-DhcpServerv4Scope

**B.** Add-DhcpServerv4SuperScope

**C.** Add-DHCPServerv4Policy

**D.** Add-DhcpServerv4MulticastScope

**Answer: D**

Explanation:

The Add-DhcpServerv4MulticastScope cmdlet adds a multicast scope on the Dynamic Host Configuration Protocol (DHCP) server.

Note: IPv4 multicast addresses are defined by the leading address bits of 1110, originating from the classful network design of the early Internet when this group of addresses was designated as Class D.

The Classless Inter-Domain Routing (CIDR) prefix of this group is 224.0.0.0/4. The group includes the addresses from 224.0.0.0 to 239.255.255.255.
