**Answer: B**

**NEW QUESTION: 3**

You have a server named Server1 that runs Windows Server 2016. You install the Docker daemon on Server1.

You need to configure the Docker daemon to accept connections only on TCP port 64500.

What should you do?

- A.** Modify the routing table on Server1.
- B.** Edit the configuration.json file.
- C.** Edit the daemon.json file.
- D.** Run the Set-ServiceWindows PowerShell cmdlet.

**Answer: C**

Explanation:

Configure Docker with Configuration File

The preferred method for configuring the Docker Engine on Windows is using a configuration file. The configuration file can be found at

'c:\ProgramData\docker\config\daemon.json'.

Only the desired configuration changes need to be added to the configuration file. For example, this sample configures the Docker Engine to accept incoming connections on port 64500. All other configuration options will use default values.

```

{
"hosts": ["tcp://0.0.0.0:64500"]
}
  
```
