NEW QUESTION: 2

- A. Option C
- B. Option D
- C. Option A
- D. Option B

Answer: B

Explanation:

Explanation

By putting the system in the DMZ (demilitarized zone) we increase the security, as the system should be opened for remote access.

A DMZ is a computer host or small network inserted as a "neutral zone" between a company's private network and the outside public network. It prevents outside users from getting direct access to a server that has company data. A DMZ often contains servers that should be accessible from the public Internet.

NEW QUESTION: 3

Which Open Systems Interconnect (OSI) layers provide Transport Control Protocol/Internet Protocol (TCP/IP) end-to-end security?

- A. Application and transport
- B. Presentation and session
- C. Application and presentation
- D. Network and application

Answer: B

Explanation:

"The Session layer (layer 5) is responsible for establishing, maintaining, and terminating communication sessions between two computers. The primary technology within layer 5 is a gateway. The following protocols operate within the Session layer:

Secure Sockets Layer (SSL)

Network File System (NFS)

Structured Query Language (SQL)

Remote Procedure Call (RPC)

The presentation layer (layer 6) is responsible for transforming data received from the application layer into a format that any system following the OSI model can understand. It imposes common or standardized structure and formatting rules onto the data. The Presentation layer is also

responsible for encryption and compression." Pg. 79-80 Tittel:
