**NEW QUESTION: 1**
The customers and vendors balances of the previous year are carried forward to the new year, but you did NOT perform the SAPF010 program (Carry Forward Receivables/Payables) manually in accounts receivable or accounts payable.
Why do you NOT need to execute this program?
Please choose the correct answer.
Response:
**A.** Because balance carryforward was performed for the leading ledger in general ledger
**B.** Because balance carryforward was performed automatically due to postings to the subledgers in the new year
**C.** Because balance carryforward was performed automatically when closing the previous year
**D.** Because balance carryforward was carried out by the Reconcile Universal Journal Entry transaction since the reconciliation displayed NO error
**Answer: A**

**NEW QUESTION: 2**
An administrator has a requirement to export decrypted traffic from the Palo Alto Networks NGFW to a third-party, deep-level packet inspection appliance.
Which interface type and license feature are necessary to meet the requirement?

**Answer: C**
Explanation:
Explanation
Working with cross-site scripting match conditions
Attackers sometimes insert scripts into web requests in an effort to exploit vulnerabilities in web applications.
You can create one or more cross-site scripting match conditions to identify the parts of web requests, such as the URI or the query string, that you want AWS WAF Classic to inspect for possible malicious scripts. Later in the process, when you create a web ACL, you specify whether to allow or block requests that appear to contain malicious scripts.
Web Application Firewall

You can now use AWS WAF to protect your web applications on your Application Load Balancers. AWS WAF is a web application firewall that helps protect your web applications from common web exploits that could affect application availability, compromise security, or consume excessive resources.

**NEW QUESTION: 4**
DRAG DROP
You are creating an application by using HTML5 and CSS3. The styles for the pages are derived from five style sheets.
The styles are not being applied correctly to the pages in the application.
You need to apply the styles from highest priority to lowest priority.
In which order should you use the five style sheets? (To answer, move the style sheet types from the list of style sheet types to the answer area and arrange them in the correct order.)

**Answer:**
Explanation:

Explanation:
* From highest priority to lowest priority.
User important style sheets
Author important style sheets
Author normal style sheets
User normal style sheets
User agent style sheets
* CSS declarations are applied in this order (from lowest to highest priority):
*User agent declarations (the default styles your browser applies to elements)
*User normal declarations (a user's own stylesheet if they're using one)
*Author normal declarations (this is your normal stylesheet)
*Author important declarations (anything your mark important)
*User important declarations (any important styles from the user's stylesheet) Reference: Assigning property values, Cascading, and Inheritance; In what order do CSS definitions take priority
