And so many exam candidates admire our generosity of the 820-605 practice questions offering help for them, If you want to know whether Lagunamarine practice test dumps suit you, you can download free demo to experience it in advance.

Useful products, When I chose the IT industry I have proven to God my strength, Because of the different habits and personal devices, requirements for the version of our 820-605 exam questions vary from person to person.

Our 820-605 test questions materials have 80% similarity with the real exams.

#### **NEW QUESTION: 1**

A project team member analyzes the following situation in SAP ECC in the stock/requirements list for a finished product: there is only one customer order and one fixed planned order with a similar quantity amount. The customer order and the planned order both have deadlines on work days but not on the same work day; the planned order has a later deadline. The project team member cannot find a rescheduling message referring to this deadline misalignment in the stock/requirements list. What reasons could there be for the missing message? (Choose two.)

- A. The time misalignment falls within the tolerance window defined in Customizing.
- B. The requirement coverage element is outside the rescheduling horizon.
- C. Requirement planning has not yet been carried out to update the rescheduling message.
- D. The elements are linked to each other via fixed pegging.

**Answer: A,B**

**NEW QUESTION: 2**

The least often used method of sabotage is:

- A. Fire
- B. Mechanical
- C. Psychological
- D. Explosive
- E. Electronic

**Answer: C**

- A. Data Integrity
- B. Disk Defragmentation
- C. Disk Reconstruction
- D. Data Movement

**Answer: C**

**NEW QUESTION: 4**

What does the SXP protocol exchange between peers?

- A. IP to SGT binding information
- B. ingress switch to SGT binding information
- C. ingress port to SGT binding information
- D. MAC to SGT binding information

**Answer: A**

Explanation:

The Security Group Tag (SGT) Exchange Protocol (SXP) is one of several protocols that supports CTS and is referred to in this document as CTS-SXP. CTS-SXP is a control protocol for propagating IP-to-SGT binding information across network devices that do not have the capability to tag packets. CTS-SXP passes IP to SGT bindings from authentication points to upstream devices in the network. This process allows security services on switches, routers, or firewalls to learn identity information from access devices.
