Answer: D

Explanation:

Streams supports changes to the data record retention period of your stream. An Amazon Kinesis stream is an ordered sequence of data records meant to be written to and read from in real-time. Data records are therefore stored in shards in your stream temporarily. The time period from when a record is added to when it is no longer accessible is called the retention period. An Amazon Kinesis stream stores records from 24 hours by default, up to 168 hours.
