- B. AWS CloudWatch supports enabling the billing alarm on the total AWS charges. Before the user can create an alarm on the estimated charges, he must enable monitoring of the estimated AWS charges, by selecting the option "Enable receiving billing alerts". It takes about 15 minutes before the user can view the billing data. The user can then create the alarms.
- C. AWS CloudWatch supports enabling the billing alarm on the total AWS charges. Before the user can create an alarm on the estimated charges, he must enable monitoring of the estimated AWS charges, by selecting the option "Enable receiving billing alerts". It takes about 15 minutes before the user can view the billing data. The user can then create the alarms.
- D. AWS CloudWatch supports enabling the billing alarm on the total AWS charges. Before the user can create an alarm on the estimated charges, he must enable monitoring of the estimated AWS charges, by selecting the option "Enable receiving billing alerts". It takes about 15 minutes before the user can view the billing data. The user can then create the alarms.

Answer: C

Explanation:

AWS CloudWatch supports enabling the billing alarm on the total AWS charges. Before the user can create an alarm on the estimated charges, he must enable monitoring of the estimated AWS charges, by selecting the option "Enable receiving billing alerts". It takes about 15 minutes before the user can view the billing data. The user can then create the alarms.

NEW QUESTION: 2

SPECIAL INSTRUCTIONS REMINDER

The remaining questions are associated with two cases. Each case has an introductory, descriptive passage (case text) that describes background information and requirements for a specific cloud based design. And each case has a set of six related, randomized questions.

You will need to read the case text in order to answer the related questions correctly.

Given that there are two cases with six scored questions each, the total number of case-based scored questions is 12.

When you display each questions you can easily review the related case text in a pop-up window by clicking on the "Case" icon (shown below) Case 4 Refer to the exhibit.

Your company is currently using a traditional SAN storage network. The server infrastructure is partially virtualized. There is a public cloud in place that is used to test development and application migration to cloud.

Business requirements:

- * Consolidate the network, storage, and compute resources
- * Simplify network management and storage provisioning
- * Maintain application performance
- * Need to share resources to reduce cost and improve efficiency

Other considerations:

- * Monitoring of protection SLAs
- * All transactions must be logged for auditing review
- * Users are validated using internal credentials

Refer to Case 4.

You are sizing the compute capacity nodes in a hyper-converged infrastructure solution. Each node has 35 TB of storage capacity. You have calculated the total cloud storage requirement to be 700 TB.

What is the minimum number of nodes required?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

NEW QUESTION: 3

About the VLAN tag processing, the following description of the error is?

- A. When Access port to send frames, stripping 802.1Q tag header, frame issued ordinary Ethernet frames
- B. When Access port receives a frame, if the frame does not contain 802.1Q tag header, will be marked with PVID port; If the frame contains the 802.1Q tag header, the switch does not deal with them directly discarded.
- C. When Trunk port to send the frame, when the port's PVID VLAN ID of the frame is not the same, discarded; When PVID VLAN ID and port with the same time frame, the pass-through
- D. When Trunk port receives a frame, if the frame does not contain 802.1Q tag header, will be marked with PVID port; If the frame contains the 802.1Q tag header, no change.

Answer: C

NEW QUESTION: 4

Scenario: A Citrix Administrator installed AutoCAD 2014 on a vDisk image and asked users to test the application. Users are reporting that the application is NOT available on their Desktop OS machines. The administrator started a test machine and verified that the application is there.

What should the administrator do to allow the users to see the application?

- A. Promote the vDisk.
- B. Change the vDisk access mode to Private.
- C. Restart the target devices.
- D. Change the target device type to Production.

Answer: C
