**Answer: B,D**

**NEW QUESTION: 4**

A service is designed to respond to an error condition by issuing a message containing detailed error information. This message includes connection information for a database that is shared by numerous services within the service inventory. An attacker intentionally sends an invalid message to the service in order to trigger an error and receive the connection information. The attacker then proceeds to connect to the database and issues a series of malicious SQL queries that make the database non-responsive. As a result, a number of services within the service inventory are disabled. Which of the following types of attacks were successfully carried out?

- A. Buffer overrun attack
- B. SQL injection attack
- C. Denial of service attack
- D. Exception generation attack

**Answer: C,D**
