NEW QUESTION: 1

365.

All recipients have an SMTP suffix of contoso.com.

You discover that all of the email messages sent to the Internet from users who have Office 365 mailboxes are routed through the on-premises Exchange servers.

You need to ensure that all of the email messages are sent directly to the Internet.

What should you do?

- A. Run the Hybrid Configuration wizard.
- B. Modify an organization relationship.
- C. Create a new transport rule.
- D. Create a new routing group connector.

Answer: A

Explanation:

Creating and configuring a hybrid deployment with the Hybrid Configuration wizard is now a single process in Microsoft Exchange Server 2013.

The wizard allows you to select and configure Client Access or Edge Transport servers to handle secure mail transport between the on-premises and Exchange Online organizations. The wizard configures on-premises Client Access servers and Microsoft Exchange Online (EOP) on your Office 365 organization for hybrid mail routing. By configuring new and existing Send and Receive connectors in the on-premises organization and Inbound and Outbound connectors in EOP, the wizard allows you to choose whether outbound messages delivered to the Internet from the Exchange Online organization will be sent directly to external mail recipients or routed through your on-premises Exchange servers included in the hybrid deployment.

Reference: Hybrid Configuration wizard You work for a financial services company that has an Exchange Server 2013 organization.
