D. Amazon VPC, AWS IAM, AWS CloudTrail, AWS CloudWatch, AWS Config, AWS GuardDuty, AWS Macie

**Answer: A,D**

## NEW QUESTION: 2

### HOTSPOT

You plan to deploy two new Microsoft Azure SQL Database instances. One instance will support a data entry application. The other instance will support the company's business intelligence efforts. The databases will be accessed by mobile applications from public IP addresses.

You need to ensure that the database instances meet the following requirements:

- \* The database administration team must receive alerts for any suspicious activity in the data entry database, including potential SQL injection attacks.
- \* Executives around the world must have access to the business intelligence application.
- \* Sensitive data must never be transmitted. Sensitive data must not be stored in plain text in the database.

In the table below, identify the feature that you must implement for each database.

NOTE: Make only one selection in each column. Each correct selection is worth one point.

### Answer:

Explanation:

Explanation:

Data entry: Threat Detection

SQL Threat Detection provides a new layer of security, which enables customers to detect and respond to potential threats as they occur by providing security alerts on anomalous activities. Users receive an alert upon suspicious database activities, potential vulnerabilities, and SQL injection attacks, as well as anomalous database access patterns.

Business intelligence: Dynamic Data Masking

Dynamic data masking limits (DDM) sensitive data exposure by masking it to non-privileged users. It can be used to greatly simplify the design and coding of security in your application.

**NEW QUESTION: 3**

What is the typical sales cycle for a Kenexa Survey Solution?

- A. 3 to 6 Months
- B. 3 to 6 Weeks
- C. 6 to 8 Weeks
- D. 6 to 8 Months

**Answer: A**

**NEW QUESTION: 4**

Your team uses Microsoft Test Manager (MTM) to manage test cases. Your team organizes test cases so that the same test case can be associated with multiple test suites.

You plan to create a test case and associate it to two different static test suites named Test Suite 1 and Test Suite 2.

You need to ensure that the test suites reference the same version of the new test case.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Right-click on the test case, and select Create a copy and add to test suite.
- B. Create the test case inside Test Suite 1.
- C. Drag the test case from Test Suite 1 into Test Suite 2.
- D. Copy the test case from Test Suite 1, and paste it onto Test Suite 2.

**Answer: B,D**
