**NEW QUESTION: 2**
Identify the four main Types of roadmaps reviewed. (Choose four)
**A.** Solution Roadmap
**B.** Global template roadmap
**C.** Upgrade Roadmap
**D.** Implementation roadmap
**E.** Download Roadmap
**F.** Solution Management Roadmap
**Answer: B,C,D,F**

**NEW QUESTION: 3**
Which two statements about proxy ARP are true? (Choose two.)
**A.** It reduces the amount of ARP traffic.
**B.** It is supported on networks without ARP.
**C.** It requires larger ARP tables.
**D.** It allows machines to spoof packets.
**E.** It must be used on a network with the host on a different subnet.
**Answer: C,D**
Explanation:
Disadvantages of Proxy ARP
Hosts have no idea of the physical details of their network and assume it to be a flat network in which they can reach any destination simply by sending an ARP request. But using ARP for everything has disadvantages. These are some of the disadvantages:
It increases the amount of ARP traffic on your segment.
Hosts need larger ARP tables in order to handle IP-to-MAC address mappings.
Security can be undermined. A machine can claim to be another in order to intercept packets, an act called "spoofing."
It does not work for networks that do not use ARP for address resolution.

It does not generalize to all network topologies. For example, more than one router that connects two physical networks.
