So passing this exam means success to ambitious workers.

NEW QUESTION: 1

While implementing multicast in wireless environment based on autonomous access points, you want to ensure that multicast traffic is not dropped during the client roaming. Which functionality on the access point issued to address this issue?

- A.** The access point automatically sends IGMP join requests to all discovered multicast groups and forwards all multicast traffic to the wireless LAN.
- B.** The access point uses IGMP snooping helper to send a general query to the wireless LAN, which prompts the client to send an IGMP membership report.
- C.** The access point uses IGMP proxy functionality to sens IGMP join requests on behalf of the associated clients.
- D.** The access point uses IGMP snooping functionality, by examining (snooping) IGMP membership report messages from associated clients, and keeps a local database of associated clients and multicast groups.

Answer: A

NEW QUESTION: 2

What is one concern that the growing trend of mobility presents to small- to medium-sized customers in terms of reliability?

- A. The more that companies rely on Wi-Fi, the greater the impact on business if any network downtime or drop-outs occur
- B. Because APs are more expensive than switches, small- to medium-sized customers cannot afford to purchase the APs needed to provide redundancy.
- C. Non-PC devices, such as tablets, have a difficult time successfully logging in to the Wi-Fi, even if the same credentials are used
- D. It is extremely difficult for a small IT staff to ensure that every user's multiple devices can make it past the company's firewall

Answer: A
